

Allan-deviation stability trajectories across runs

Each line joins a run's minimum to its longest reliable averaging time; upward lines expose long-time drift or a stability floor.

- improving with averaging (668)
- random-walk-like long-term drift (95)
- insufficient data (678)
- Longest reliable τ
- stability floor / flicker-like (287)
- strong drift / trend (2)
- Minimum Allan deviation
